## Worksheet 3

Let  $A,\ B,\ and\ C$  be sets. Prove or disprove the following statements.

1.	If $A \cap B = \emptyset$ and $B \cap C = \emptyset$ , then $A \cap C = \emptyset$
	<i>Proof.</i> Assume that $A=\{a\}$ and $C=\{a\}$ and $B=\{b\}$ It follows that $A\cap B=\emptyset$ and $B\cap C=\emptyset$ however $A\cap C=\{a\}$ There for: $\exists A:\exists C$ $A\cap C\neq\emptyset$ and $A\cap B=\emptyset$ and $B\cap C=\emptyset$
2.	If $A \not\subseteq B$ and $B \not\subseteq C$ , then $A \not\subseteq C$
	<i>Proof.</i> Assume that $A=\{a\}$ and $C=\{a,c\}$ and $B=\{b\}$ It follows that $A\not\subseteq B$ and $B\not\subseteq C$ however $A\subset C$ There for: $\exists A:\exists C:A\subset C$ and $A\not\subseteq B$ and $B\not\subseteq C$
3.	If $A \subseteq \emptyset$ , then $a = \emptyset$
	<i>Proof.</i> Assume the negation $A\subseteq\emptyset$ and $A\neq\emptyset$ . If $A\neq\emptyset$ then $A\not\subseteq\emptyset$ by definition of $\emptyset$
4.	If $A \subseteq C$ and $B \subseteq C$ , then $A \cap B \subseteq C$
	<i>Proof.</i> Assume that $A\subseteq C$ and $B\subseteq C$ there for 2 cases can occur fo $A\cap B\subseteq C$ Case 1: $A\cap B=\emptyset$ there for $A\cap C\subseteq C$ as $\emptyset\subset C$ Case 2: $A\cap B\neq\emptyset$ then $\forall e\in A\cap B: e\in C$ there for $A\cap B\subseteq C$
5.	If $f:A\to B$ is injective and $g:B\to C$ is injective, then $g\circ f:A\to C$ is injective.
	Proof.
6.	If $f:A\to B$ is surjective and $g:B\to C$ is surjective, then $g\circ f:A\to C$ is surjective
	Proof.
7.	Give an example of a function $f:A\to A$ that is injective but not surjective.
	<i>Proof.</i> $g:b\to 2*b$ maps to only the even co-domain

8. Give an example of a function  $g:A\to A$  that is surjective but not injective.

Proof. 
$$\Box$$

- 9. Let  $f:A\to B$  and  $g:B\to A$ . If  $g\circ f=id_a$ , then both f and g are bijections.
- 10. If  $f:A\to A$  is surjective, and if A is a finite set, then f is injective.
- 11. If  $f:A\to A$  satisfies the property that  $f\circ f=id_a$  then f is a bijection.
