Andrew Jones

Worksheet 3

Let A, B, and C be sets. Prove or disprove the following statements.

1. If $A \cap B = \emptyset$ and $B \cap C = \emptyset$, then $A \cap C = \emptyset$

   Proof. $\forall a \in A$ □

2. If $A \not\subseteq B$ and $B \not\subseteq C$, then $A \not\subseteq C$

3. If $A \subseteq \emptyset$, then $a = \emptyset$

4. If $A \subseteq C$ and $B \subseteq C$, then $A \cap B \subseteq C$

5. If $f : A \to B$ is injective and $g : B \to C$ is injective, then $g \circ f : A \to C$ is injective.

6. If $f : A \to B$ is surjective and $g : B \to C$ is surjective, then $g \circ f : A \to C$ is surjective

7. Give an example of a function $f : A \to A$ that is injective but not surjective.

8. Give an example of a function $g : A \to A$ that is surjective but not injective.

9. Let $f : A \to B$ and $g : B \to A$. If $g \circ f = id_a$, then both f and g are bijections.

10. If $f : A \to A$ is surjective, and if A is a finite set, then f is injective.

11. If $f : A \to A$ satisfies the property that $f \circ f = id_a$ then f is a bijection.
